

CHAPTER 2

0207.14.91	0207.27.91
MECHANICALLY DEBONED OR SEPARATED MEAT	
Mechanically deboned or separated meat (meat separated from bones by mechanical means) is a paste-like or batter-like meat product obtained by forcing turkey or chicken bones, with attached edible meat, under high pressure through a sieve or similar device to separate the bones from the edible meat tissue. Muscle and tissue are no longer distinctly visible. It is used for the manufacture of sausages, nuggets and similar products.
